

2018 STAND-ON MOWER

MACHINE VERSATILITY. COMFORT AND PRODUCTIVITY. COMMERCIAL DURABILITY.

WHY USE A STAND-ON

VERSATILITY AND PRODUCTIVITY

Thanks to their superior maneuverability, Exmark's stand-on mowers are ideal for smaller properties, or lawns with multiple flowerbeds, irregular shrubbery or tight landscaping. Compared to a walk-behind mower, a stand-on machine is more productive on larger properties. Plus, the ease of stepping off the machine quickly to pick up debris, open a gate or move objects makes this stand-on idea for productivity.

EASE OF TRANSPORT

Vantage S-Series models feature an operator platform that folds up quickly and easily, without tools, significantly reducing the footprint of the machine on a truck or trailer. This eases the process of loading and unloading the trailer between jobs, so crews can get from job to job quicker and more efficiently.

COMFORT

Vantage does not include accessories shown

OPERATOR PLATFORM

Designed to deliver maximum operator comfort by dramatically reducing bumps and vibrations, the operator platform is supported by rubber bumpers to provide a comfortable ride for operators of any size. Patented, integrated thigh pads provide increased comfort and control, and pivot out of the way for maintenance access.

ERGONOMICALLY DESIGNED CONTROLS

The simple, easy-to-use control system puts all vital operator controls within easy reach. An adjustable front reference bar allows the operator to set the top speed of the machine. Exmark's patented mechanical control system features solid rods instead of cables for light action, accurate response and reduced control system maintenance.

Long known for its state-of-the-art design, incredible maneuverability and legendary durability, the Exmark® Vantage® has set the standard for operator-focused, stand-on mower performance. It's impressive list of innovative features is anchored by a weight-compensating operator platform and patented control system.

RESPONSIVE CONTROL SYSTEM

The simple, intuitive operator controls are angled for a natural fit with the operator's hands and wrists. The design improves smoothness and reduces drive lever tension—resulting in reduced operator fatigue and improved handling.

STABILITY

Vantage S-Series mowers feature a large, rubber padded platform with weight-compensating suspension that allows the operator to easily and comfortably shift his or her weight on hills for maximum control and maneuverability. This also makes curb clearance a breeze.

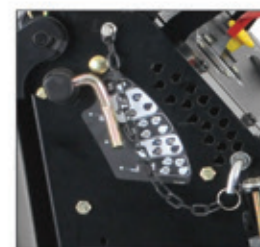

ADJUSTABLE FRONT REFERENCE BAR

The ergonomically designed steering system includes an adjustable front reference bar which enables operators to effortlessly vary the top speed of the machine.

OPERATOR PLATFORM

A sturdy platform with self-compensating suspension provides a comfortable ride for operators of all sizes. The patented, integrated thigh pads also pivot away, allowing easy access for maintenance, as well as fold up for reduced trailer space, storage or converting the Vantage to a walk-behind.

HEIGHT OF CUT

Adjusting the cut height on the Exmark Vantage is simple. The controls are located on the side of the mower and can be quickly and easily adjusted to match turf conditions or for transport.

COMMERCIAL DURABILITY

Equipped with commercial-grade engines and Exmark's industry leading UltraCut decks, these sturdy and durable machines are built to last delivering the performance operators need time after time.

QUALITY OF CUT

Our exclusive flow-control baffles virtually eliminate blowout, reduce the amount of horsepower required to power the deck and create a superior vacuum that lifts the grass to its tallest point before cutting.

ECO-FRIENDLY PROPANE OPTION

We're constantly working to find better, more environmentally sound solutions for landscape professionals. Vantage propane mowers can save you some cash and leave little impact on the planet.

DURABILITY

ULTRACUT™ DECKTECHNOLOGY

Exmark’s heritage with commercial landscapers puts durability at the forefront of our design process. The Vantage features Exmark’s industry leading UltraCut decks. The UltraCut Series 4 deck is available on 48”, 52” and 60” models, while the UltraCut Series 3 deck is on the 36”.

Both UltraCut decks are constructed from 10-gauge steel top-plates with spindle reinforcement rings, and 7-gauge steel side-skirts that are continuously seam-welded to meet the demands of commercial use. Additionally, all Vantage models feature Exmark’s exclusive maintenance-free, sealed-bearing spindle assemblies—which are made from cast aluminum, providing superior strength.

UltraCut Deck Comparison	UltraCut Series 3	UltraCut Series 4
Bag	✓	✓
Mulch	✓	✓
Deck Depth	5.0"	5.5"
Cutter Housing	7.75"	7.75"
Spindle Shaft	25mm	25mm

COMMERCIAL ENGINES

At Exmark, we work hard to match the engine and machine for the most optimized mower performance possible for the operator’s specific needs. That’s why Vantage S-Series models are offered with a variety of industry leading commercial engines. Choose from carbureted gasoline, fuel-saving EFI gasoline or EFI propane configurations. Engine options include:

Kawasaki FS541V and FX691V V-Twins
Available on the 36”, 48”, and 52” models

Kohler ECV730 and ECV740 Command EFI V-Twins
Available on the 52” and 60” models

Kohler PCV740 Command EFI Propane V-Twin
Available on the 52” and 60” models

***Parts Plus:** Restrictions apply; please contact your Exmark dealer for further details. Dealer participation is optional. Program not available in Hawaii and Canada.

Products depicted in this literature are for demonstration purposes only. Actual products offered for sale may vary in use, design, required attachments and safety features. We reserve the right to improve our products and make changes in specifications, designs and standard equipment without notice and without incurring obligation. For additional product information including operation manuals, safety materials and warranty details, please visit www.exmark.com or see your dealer for complete details.

Many manufacturers use 100% efficiency ratings for sale purposes. Exmark believes an 80% efficiency rating is more representative of actual mowing conditions, as it allows for turns and

overlapping. Formulas for calculating acres per hour: **100% efficiency:** MPH x width of cut ÷ 99 = acres per hour | **80% efficiency:** MPH x width of cut ÷ 124 = acres per hour
